TI - Muddy water purifier without using coagulants - has aluminium@ anode and stainless steel cathode, supported by holders, alternately placed along muddy water flowing stream
AB - J04298284 Aluminium anode and stainless steel cathode supported by holders are arranged alternately along muddy water flowing stream.
- USE - For flocculation of muddy water without use of coagulants(Dwg.0/5)
IW - MUD WATER PURIFICATION COAGULATE ALUMINIUM@ ANODE STAINLESS STEEL CATHODE SUPPORT HOLD ALTERNATE PLACE MUD WATER FLOW STREAM

TI - POLLUTED WATER TREATING DEVICE
AB - PURPOSE: To consolidate the suspended matter in polluted water without using a flocculant
- CONSTITUTION: A flow passage part 1 which allows the passage of the polluted water is provided. Anode electrode plates 5 and cathode electrode plates 6 respectively connected to the anode 3 and cathode 4 of a DC power source 2 are alternately arranged to form an electrode plate group 7. This electrode plate group 7 is held by a supporting material 8. The above-mentioned anode electrode plates made of aluminum and the cathode electrode plates made of a stainless steel are included.
